Experience

Scopely – AI Engineer Intern (Present)

n8n, OpenAI, Google APIs, Apps Script, Slack API, Python, LangGraph, FastAPI, Grafana

• RCA Agent – Live Event Root Cause Analysis

- Built an **agentic RCA system** to analyze client and backend logs across **BigQuery** and **AWS CloudWatch**, reducing production debugging time from **6 hours to 30 minutes (92% reduction)**.
- Reconstructed **end-to-end user journeys** by correlating session IDs, client events, API interactions, and backend logs, reducing **manual investigation effort by 80%**.
- Integrated **OpenTelemetry** and **Grafana observability** with **FastAPI/MCP** tools, enabling the agent to dynamically query and correlate distributed production telemetry.

• LOVA – Self-improving Multi-Agent LiveOps Validation Platform

- Built a **LiveOps validation engine** that automatically validates **design documentation against live production builds**, detecting configuration mismatches across game content.
- Automated validation of **50K+ production configuration fields** across spreadsheets, snapshots, localization, rewards, and assets, reducing QA effort from **8 person-days/week to 30 minutes**.
- Built a **self-improving multi-agent system** that evaluates its own validation results, automatically corrects errors and retries when evaluation scores are low, improving reliability without manual intervention.
- Generated **evidence-backed validation results** for every decision, providing the exact configuration differences and supporting data required to verify and debug issues.

• Transvolt Mobility – Backend Intern (2025)

FastAPI, AWS (DynamoDB, S3), AWS SDK

- Autonomous Vehicle Health Analysis:** Computed EV health metrics including **SOC and battery performance**, identifying failures and flagging **10 trucks**, saving **INR 8L per battery**.
- High-Performance Data API:** Built an authenticated **FastAPI** layer over **DynamoDB + S3** to serve **20L+ records**.
- Achieved a **25× speedup (25s → 1ms)** through multithreading and optimized database queries.

Projects

CLAIMIQ – RAG-Optimized Insurance Query Engine

React.js, MongoDB, Redis, FastAPI, LiteLLM, Hugging Face, Langfuse

- Built a full-stack insurance-document RAG platform with clause-level retrieval, highlighting, and filtering; improved query accuracy by **15%**, scaled to **100+ documents**, and achieved **3×** higher ingestion throughput using fanout retrieval.

CShell – Unix Shell Implementation (CodeCrafters)

Python, Linux, POSIX

- Implemented a Unix shell in **Python** with support for command parsing, process execution, pipes, redirection, and built-in commands using POSIX APIs; achieved **Global Rank 141** in the CodeCrafters challenge.

Technical Skills

AI/LLM: LLMs, RAG, Embeddings, LLM Evaluation, Prompt Engineering, Fine-Tuning

Agentic AI: LangGraph, Multi-Agent Systems, MCP, Tool Calling, Agent Evaluation, Self-Correcting Agents

Backend: Python, FastAPI, Node.js, REST APIs, C++, JavaScript

Data & Observability: BigQuery, MongoDB, Redis, DynamoDB, OpenTelemetry, Grafana, Langfuse

Cloud & DevOps: AWS (S3, Lambda, DynamoDB, CloudWatch), Docker, Jenkins, Git

Research

Co-Author – DoW Attack Mitigation with TEEs, Bennett University (IEEE IC3I 2025 Accepted)

Jun 2025 – Present

- Developed a **TEE-based gatekeeper** for FaaS platforms, achieving **100% mitigation** of Denial-of-Wallet attacks with **12.9% latency overhead**; results accepted at **IEEE IC3I 2025**.

Achievements

- Global Rank 141** – CodeCrafters Shell Challenge
- Rank 52** – CodeChef Dev Challenge [Link]
- Runner-up** – FishHunt CTF (Cybersecurity)

Education

Bennett University

B.Tech in Computer Science (AI Specialization) CGPA: 8.8 / 10

Sep 2022 – May 2026

Greater Noida, Delhi-NCR
